DISSEMINATION

This flyer has been produced by the partners of PRINTODECO project. The project was funded by the COSME Programme of the European Community. The content presented in this flyer represents the views of the authors. The European Commission has no liability in respect of the contents.

project

the next big thing in the melamine industry

The shared objective is to assess the market-uptake of digital printing solutions to make a customised melamine paper for decorative boards.

The melamine decorative boards represent a huge market, being Europe a major actor with nearly 12 billion sqm. per year.

Digital printing will provide more industrial flexibility, as it will make possible to produce under demand and to reduce stocks.

PRINTODECO will also allow great personalisation possibilities to the decorative boards market. It will give more leadership to final customers.

trends

from building material to fashion market

The competitiveness of decorative boards industry is currently based on the rotogravure technique, which needs large run lengths.

Meanwhile, the market of melamine boards is changing to be more similar to fashion market than to traditional building products.

The use of digital printing for melamine paper represents a change of paradigm in the business of decorative boards.

PRINTODECO will not only affect to the manufacturing of the paper, but it will also change the whole value chain.

business

leadership to the customer and the SMEs

The project will increase the business opportunities for SMEs, as it will reduce the cost of new products development.

It will make possible to enter into the market of melamine decorative boards to those companies with design and printing capabilities.

The project will also reduce time to market and development costs. This will help small companies to differentiate.

By means of digital printing tools, PRINTODECO will make possible a new relation with the customer and unexpected products.
